

Information of Product

Name	PHACT™ CB0400J
Characteristic	PHACT CB0400J is a 100% bio-based biodegradable PHA compound made with PHACT S1000P and A1000P. It offers a sustainable alternative to petroleum-based plastics, helping reduce carbon emissions and waste management burdens. This compound is especially suitable for processing general plastic products and can be applied to various end-use applications. It is biodegradable in industrial composting, home composting, soil, and marine environments, and is designed to degrade safely without releasing harmful heavy metals or toxic substances. It also provides FDA food-contact compliance, improved processability versus PLA, and enhanced flexibility and impact resistance.
